

TA Today

A New Introduction to
Transactional Analysis

Second Edition

Ian Stewart
Vann Joines

Lifespace Publishing
Melton Mowbray and Chapel Hill

CONTENTS

Preface / xi

Part I INTRODUCING TA

1. What TA Is / 3

Key ideas of TA 3
The philosophy of TA 6

Part II PICTURING PERSONALITY: The Ego-State Model

2. The Ego-State Model / 11

Examples of ego-state shifts 12
Definition of ego-states 15
Are ego-state distinctions real? 16
Ego-states and superego, ego, id 17
Ego-states are names, not things 18
A matter of words: are there 'just three' ego-states? 19
The over-simplified model 20

3. Functional Analysis of Ego-States / 23

Adapted Child and Free Child 24
Controlling Parent and Nurturing Parent 27
Adult 28
Egograms 28
The functional model describes only behaviour, not thinking
or
feeling 31

4. The Second-Order Structural Model / 34

Second-order structure: Parent 36
Second-order structure: Adult 37
Second-order structure: Child 38
How the second-order structure develops 40
Distinguishing structure from function 42

5. Recognizing Ego-States / 45

- Behavioural diagnosis 45
- Social diagnosis 49
- Historical diagnosis 50
- Phenomenological diagnosis 51
- Ego-state diagnosis in practice 51
- The executive and the real Self 52

6. Structural Pathology / 56

- Contamination 56
- Exclusion 59

Part III COMMUNICATING: Transactions, Strokes and Time Structuring

7. Transactions / 65

- Complementary transactions 65
- Crossed transactions 68
- Ulterior transactions 70
- Transactions and non-verbals 73
- Options 74

8. Strokes / 77

- Stimulus-hunger 77
- Kinds of strokes 78
- Stroking and reinforcement of behaviour 79
- Giving and taking strokes 80
- The stroke economy 83
- The stroking profile 86
- Self-stroking 87
- Are there 'good' and 'bad' strokes? 89

9. Time Structuring / 92

- Withdrawal 93
- Rituals 93
- Pastimes 94
- Activities 95

Games 96
Intimacy 98

Part IV WRITING OUR OWN LIFE-STORY: Life-Scripts

10. The Nature and Origins of Life-Script / 103

Nature and definition of life-script 104
Origins of the script 105

11. How the Script is Lived Out / 111

Winning, losing and non-winning scripts 111
The script in adult life 114
Why script understanding is important 117
The script and the life course 119

12. Life Positions / 121

Life position in adulthood: the OK Corral 123
Personal change and the OK Corral 126

13. Script Messages and the Script Matrix / 129

Script messages and the infant's perception 129
Kinds of script message 129
The script matrix 132

14. Injunctions and Decisions / 138

Twelve injunctions 138
Episcript 144
How decisions relate to injunctions 145
Antiscript 149

15. Process Scripts and Drivers / 148

Process scripts 152
Driver behaviours 157
Should we set out to 'cure' drivers and process scripts? 168

16. Personality Adaptations / 171

The six personality adaptations 171

How drivers indicate personality adaptations 175
Personality adaptations and process scripts 176
Making and keeping contact: the Ware Sequence 177
The Ware Sequence and personality adaptation 178
Using the Ware Sequence in the long and short term 181
Personality adaptations and script content 181
'Pen-portraits' of the six adaptations 182

Part V MAKING THE WORLD FIT OUR SCRIPT: Passivity

17. Discounting / 191

Nature and definition of discounting 191
Grandiosity 192
The four passive behaviours 193
Discounting and ego-states 196
Detecting discounts 196

18. The Discount Matrix / 199

Areas of discounting 199
Types of discounting 199
Levels (modes) of discounting 200
The discount-matrix diagram 200
Using the discount matrix 203

19. Frame of Reference and Redefining / 206

The frame of reference 206
Frame of reference and the script 208
Nature and function of redefining 208
Redefining transactions 209

20. Symbiosis / 212

'Healthy' v. 'unhealthy' symbiosis 216
Symbiosis and the script 217
Symbiotic invitations 218
Second-order symbiosis 220

Part VI JUSTIFYING OUR SCRIPT BELIEFS: Rackets and Games

21. Rackets and Stamps / 225

- Rackets and script 228
- Racket feelings and authentic feelings 230
- Racket feelings, authentic feelings, and problem-solving 232
- Racketeering 234
- Stamps 235

22. The Racket System / 239

- Script Beliefs and Feelings 239
- Rackety Displays 243
- Reinforcing Memories 244
- Breaking out of the Racket System 247

23. Games and Game Analysis / 250

- Examples of games 250
- Sweatshirts 253
- Different degrees of games 253
- Formula G 254
- The Drama Triangle 255
- Transactional analysis of games 257
- The Game Plan 259
- Definitions of games 260

24. Why People Play Games / 263

- Games, stamps and script payoff 263
- Reinforcing script beliefs 264
- Games, symbiosis and the frame of reference 264
- Games and strokes 267
- Berne's 'six advantages' 268
- Positive payoffs of games 268

25. How to Deal with Games / 270

- Need we name the game? 270
- Some familiar games 271
- Using Options 273
- Refusing the negative payoff 274

Replacing game strokes 276

Part VII CHANGING: TA in Practice

26. Contracts for Change / 281

Steiner's 'four requirements' 281

Why use contracts? 282

Making an effective contract 284

27. Aims of Change in TA / 288

Autonomy 288

Becoming free from the script 289

Problem-solving 290

Views of 'cure' 290

28. TA Therapy and Counselling / 293

'Therapy' or 'counselling'? 293

Self-therapy 294

Why therapy? 295

Characteristics of TA therapy 296

Three schools of TA 297

29. TA in Education and Organizations / 303

Main features of educational and organizational applications
303

Organizational applications 304

TA in education 306

30. How TA Has Developed / 310

Eric Berne and the origins of TA 310

The early years 312

The 1970s: years of mass popularity and professional
innovation 314

1980s to the present: international expansion and
consolidation 316

APPENDICES

- A. Books by Eric Berne / 323**
- B. Other Key Books on TA / 325**
- C. Winners of the Eric Berne Memorial Scientific Awards / 331**
- D. TA Organizations / 335**
- E. Training and Accreditation in TA / 338**
- F. TA 101 Course Outline / 343**

NOTES AND REFERENCES / 347

BIBLIOGRAPHY / 364

GLOSSARY / 374

INDEX / 385

Chapter 1

WHAT TA IS

‘Transactional analysis is a theory of personality and a systematic psychotherapy for personal growth and personal change’.

That’s the definition of TA suggested by the International Transactional Analysis Association. 1 In fact, TA today is all this and much more. Among psychological approaches, transactional analysis is outstanding in the depth of its theory and the wide variety of its applications.

As a *theory of personality*, TA gives us a picture of how people are structured psychologically. To do so it uses a three-part model known as the *ego-state model*. The same model helps us understand how people function – how they express their personality in terms of behaviour.

TA also provides a *theory of communication*. This can be extended to give a method of *analysing systems and relationships*, both in personal life and in work situations.

TA offers a theory of *child development*. The concept of *life-script* explains how our present life patterns originated in childhood. Within the framework of life-script, TA develops explanations of how we may continue to re-play childhood strategies in grown-up life, even when these produce results that are self-defeating or painful. Thus TA gives us a *theory of psychopathology*.

In the area of practical applications, TA does indeed offer us a system of psychotherapy. It is used in the treatment of all types of psychological disorders, from everyday living problems to severe psychosis. It provides a method of therapy for use with individuals, groups, couples and families.

Outside the therapeutic field, TA is used in educational settings. It helps teachers and learners to stay in clear communication and avoid setting up unproductive confrontations. It is particularly suitable for use in counselling.

TA is a powerful tool in management and communications training and in organizational analysis. Among the many other applications of TA are its uses by social workers, police and probation authorities, and ministers of religion. TA can be used in any field where there is a need for understanding of individuals, relationships and communication.

Key ideas of TA

There are a few key ideas that form the foundation of TA theory. They

serve to distinguish TA from any other psychological system. In the coming chapters, we shall examine all these ideas in detail and illustrate them by examples. Here they are first in summary. We suggest you simply read this section through to become acquainted with the terms and general ideas.

The ego-state model (PAC model)

Most basic of all is the *ego-state model*. An *ego-state* is a set of related behaviours, thoughts and feelings. It is a way in which we manifest a part of our personality at a given time.

The model portrays three distinct types of ego-state.

If I am behaving, thinking and feeling in response to what is going on around me here and now, using all the resources available to me as a grown-up person, I am said to be in an *Adult ego-state*.

At times, I may behave, think and feel in ways which are a copy of one of my parents, or of others who were parent-figures for me. When I do so, I am said to be in a *Parent ego-state*.

Sometimes I may return to ways of behaving, thinking and feeling which I used when I was a child. Then I am said to be in a *Child ego-state*.

Note the initial capital letters. They are always used when we want to indicate that we are referring to the ego-states (Parent, Adult, Child). A small letter beginning the word shows we mean a real-life parent, adult or child.

The ego-state model is often known alternatively as the *P-A-C model*, after these three initial letters.

When we use the ego-state model to understand various aspects of personality, we are said to be employing *structural analysis*.

Transactions, strokes, time structuring

If I am communicating with you, I can choose to address you from any one of my ego-states – Adult, Child or Parent. You can reply in turn from any of your ego-states. This exchange of information is known as a *transaction*, which is the basic unit of social discourse.

The use of the ego-state model to analyse sequences of transactions is referred to as *transactional analysis proper*. The word ‘proper’ is added to show that we are talking about this branch of TA in particular, rather than TA as a whole.

When you and I transact, I signal recognition of you and you return that recognition. In TA language, any act of recognition is called a *stroke*. People need strokes to maintain their physical and psychological well-being.

When people are transacting in groups or pairs, they use time in vari-

ous specific ways which can be listed and analysed. This is the analysis of *time structuring*.

Life-script

Each of us, in childhood, writes a life-story for himself or herself. This story has a beginning, a middle and an end. We write the basic plot in our infant years, before we are old enough to talk more than a few words. Later on in childhood, we add more detail to the story. Most of it has been written by the age of seven. We may revise it further during adolescence.

As grown-ups, we are usually no longer aware of the life-story we have written for ourselves. Yet we are likely to live it out faithfully. Without being aware of it, we are likely to set up our lives so that we move towards the final scene we decided upon as infants.

This unaware life-story is known in TA as the *life-script*.

The concept of life-script ranks with the ego-state model as a central building-block of TA. It is especially important in psychotherapeutic applications. In *script analysis*, we use the concept of life-script to understand how people may unknowingly set up problems for themselves, and how they may set about solving those problems.

Discounting, redefining, symbiosis

The young child decides on a life-script because it represents the best strategy that the child can work out to survive and get by in what often seems like a hostile world. In our Child ego-state, we may still be believing that any threat to our infant picture of the world is a threat to the satisfaction of our needs, or even to our survival. Thus we may sometimes distort our perception of reality so that it fits our script. When we do so, we are said to be *redefining*.

One way of ensuring that the world fits our script is to selectively ignore information available to us about a situation. Without conscious intention, we blank out the aspects of the situation that would contradict our script. This is called *discounting*.

As a part of maintaining our script, we may sometimes get into relationships as grown-ups which re-play the relationships we had with our parents when we were children. We do this without being aware of it. In this situation, one of the partners in the relationship plays the part of Parent and Adult, while the other acts Child. Between them, they function as though they had only three instead of six ego-states available. A relationship like this is called a *symbiosis*.

Rackets, stamps and games

As young children, we may notice that in our family, certain feelings are encouraged while others are prohibited. To get our strokes, we may de-

side to feel only the permitted feelings. This decision is made without conscious awareness. When we play out our script in grown-up life, we continue to cover our authentic feelings with the feelings that were permitted to us as children. These substitute feelings are known as *rackets*.

If we experience a racket feeling and store it up instead of expressing it at the time, we are said to be saving a *stamp*.

A *game* is a repetitive sequence of transactions in which both parties end up experiencing racket feelings. It always includes a *switch*, a moment when the players experience that something unexpected and uncomfortable has happened. People play games without being aware they are doing so.

Autonomy

To realize our full potential as grown-ups, we need to update the strategies for dealing with life which we decided upon as infants. When we find that these strategies are no longer working for us, we need to replace them with new ones that do work. In TA language, we need to move out of script and gain *autonomy*.

The tools of TA are designed to help people achieve that autonomy. Its components are *awareness*, *spontaneity*, and the *capacity for intimacy*. It implies the ability to solve problems using the person's full resources as a grown-up.

The philosophy of TA

TA rests upon certain philosophical assumptions. These are statements about people, life and the possibility of change. ²

The philosophical assumptions of TA are:

People are OK.

Everyone has the capacity to think.

People decide their own destiny, and these decisions can be changed.

From these assumptions there follow two basic principles of TA practice:

It is a contractual method.

It involves open communication.

People are OK

The most fundamental assumption of TA is that *people are OK*.

This means: you and I both have worth, value and dignity as people. I accept myself as me and I accept you as you. This is a statement of essence rather than behaviour.

At times, I may not like nor accept what you *do*. But always, I accept what you *are*. Your essence as a human being is OK with me, even though your behaviour may not be.

I am not one-up to you, and you are not one-up to me. We are on the same level as people. This is true even though our accomplishments may differ. It is true even though we may be of different race, age or religion.

Everyone has the capacity to think

Everyone except the severely brain-damaged has the capacity to think. Therefore it is the responsibility of each of us to decide what he or she wants from life. Each individual will ultimately live with the consequences of what he or she decides.

Decisional model

You and I are both OK. We may sometimes engage in not-OK behaviour. When we do, we are following strategies we *decided* upon as young children.

These strategies were the best ways we could work out as infants to survive and get what we wanted from a world that may have seemed hostile. As grown-ups, we still pursue these same patterns at times. We may do this even though the results are unproductive or even painful for us.

Even when we were young children, our parents could not *make* us develop in one particular way rather than another. They could certainly exert strong pressures on us. But we made our own decisions whether to comply with these pressures, to rebel against them or to ignore them.

For us as grown-ups, the same is true. We cannot be *made* to feel or behave in particular ways by others, or by 'the environment'. Other people, or our life circumstances, may exert strong pressures on us. But it is always our own decision whether to conform to these pressures. We are responsible for our own feelings and behaviour.

Any time we make a decision, we can change that decision later. This is true of the early decisions we made about ourselves and the world. If some of these infant decisions are producing uncomfortable results for us as grown-ups, we can trace the decisions and change them for new and more appropriate decisions now.

Thus, people can change. We achieve change not merely by insight into our old patterns of behaviour, but by actively deciding to change those patterns. The changes we make can be real and lasting.

Contractual method

If you are a TA practitioner and I am your client, then we take *joint responsibility* for achieving whatever change(s) I want to make.

This follows from the assumption that you and I relate on equal terms.

It is not up to you to do things *to* me. Nor do I come to you expecting you will do everything *for* me.

Since we both take part in the process of change, it is important that we both know clearly how the task will be shared. Therefore we enter into a *contract*.

A contract is a statement of the responsibility of each party. As client, I say what I want to change and what I am willing to do in order to bring about that change. You, as practitioner, confirm that you are willing to work with me in this task. You undertake to use the best of your professional skills in doing so, and say what recompense you want from me in return for your work.

Open communication

Eric Berne insisted that the client, as well as the practitioner, should have full information about what is going on in their work together. This follows from the basic assumptions that people are OK and that everyone can think.

In TA practice, case notes are open to the client's inspection. The practitioner encourages the client to learn the ideas of TA. Thus the client can take an equal role in the process of change.

To help in communication, the ideas of TA are expressed in simple language. Instead of the long Latin- or Greek-derived words customary in some other branches of psychology, TA speaks in familiar words: *Parent, Adult, Child, game, script, stroke*.

Some people have assumed that this straightforward language must reflect superficial thinking. Their view is mistaken. Though TA's language is simple, its theory is profound and closely reasoned.
